SMARTCARD SYSTEM
iBonus

Synopsis:

iBonus System is deployed for Global Emirates

Detail:

iBonus System matched the pace of fast deployment as required by them specially for managing Meal coupon system, and was ready to use in record 1 week time Duration.

For Global Emirates, speed of transactions and downtime could be major factors which determines winning or losing. They may need to settle and update meal count Balances to all prestigious employees during final Bill settlement. iBonus Prepaid System, as an off-the-shelf system, have successfully been specially deployed for in their club with 5 Terminals and 5000 cards with perfect integration of tripod access control initially in record 3 Days time. iBonus System managed to survive in the rugged environment and is providing required speed to finish the transactions in record time.

Bonus Prepaid Terminals were used as prepaid/postpaid Meal . iBonus Terminals were automatically deducting Prepaid balances during each purchasing. This way Management and Customers enjoys win-win situations.

iBonus generic version has 95% of what this project is needed. Based on the core of journal database, card replacement, repair and renew and all other rugged software design,. Technical Consultant team at AVI INFOSYS LLC managed to design and deploy the specification based on policies of Client.

Many customers of iBonus System find that the generic version can suit their need. Based on its robust data handling algorithm, even customization is needed, this can be done very quickly while maintaining its beauty, thereby lowering the cost of customization.
