Synopsis:

The Emirates Pilots Club (EPC) is a non-profit social club founded in 2000 by a group of dedicated airline pilots. We organise social, sporting and leisure opportunities for our members in Dubai as well as down-route around the world. EPC membership is open to all EK pilots and their families and also a smaller number of Other Airline Pilots & Air Traffic Controllers. The Club now has over 8,000 adult members.

Detail:

The EPC is run by a Committee of Full Members, which is led by an Executive Board consisting of the Chairman, Vice-Chairman and the Treasurer. The Committee meets on a regular basis to control and manage the affairs of the Club. You'll find more details about the Committee members and the constitution of the EPC after log-in at Committee/Constitution.

EPC members are issued membership cards which enable them to avail the services and offers provided by the Partners of the EPC. The EPC allows Partners to advertise themselves and their services as well as special promotions to our members on this website which contains a directory of all offers. iBonus System matched the pace of fast deployment as required by them, and was ready to use in record 1 week time Duration.

For EPC, speed of transactions and downtime could be major factors which determines winning or losing. They may need to settle and update Prepaid Balances to all prestigious customers during final Bill settlement. iBonus Prepaid System, as an off-the-shelf system, have successfully been specially deployed for in their club with 19 Terminals and 15000 cards initially in record 3 Days time. iBonus System managed to survive in the rugged environment and is providing required speed to finish the transactions in record time.

Bonus Prepaid Terminals were used as prepaid Sub System for Discount card applications. iBonus Terminals were automatically deducting Prepaid balances during each purchasing. This way Management and Customers enjoys win-win situations.

iBonus generic version has 95% of what this project is needed. Based on the core of journal database, card replacement, repair and renew and all other rugged software design,. Technical Consultant team at AVI INFOSYS LLC managed to design and deploy the specification based on policies of Client.
